

CAMILLE VEDANI

Currently a **second-year engineering student at ENSEEIHT** in a work-study program (FISA) and apprentice software engineer at Kyber, I am looking to **spend a semester (six months) studying abroad**. Passionate about electronics and embedded systems, I aim to deepen my technical skills in an international environment.

SKILLS

- Programming languages: Rust, Python, Java, C, C++, OCaml, VHDL, Promela, CUDA, JavaScript, WebAssembly
- Tools: ROS, Docker, Git, embedded Linux, LaTeX
- Strong work ethic
- Team-oriented
- Curious

LANGUAGES

- English C1 / Spanish B2
- Working knowledge of Literary Arabic and Russian

HOBBIES AND INTERESTS

- Swimming
- Tracking planes on FlightRadar
- Traveling

EDUCATION

ENSEEIHT – Toulouse INP (31):
2025 – present:
Engineering degree in Digital Sciences – Computer Science & Networks, work-study program (FISA). **Currently in 2nd year.**

Université Toulouse III – Paul Sabatier (31):
2024 – 2025:
MSc Year 1 (Embedded and Connected Systems: Infrastructure and Software)

Aix-Marseille Université (13):
2022 – 2024:
Double Major in Mathematics and Computer Science

Classe préparatoire, Lycée Thiers, Marseille (13):
2020 – 2022:
Intensive Preparatory Classes for Grandes Écoles (BCPST track: Biology, Chemistry, Physics and Earth Sciences)

EXPERIENCE

- **Kyber, Paris (75) – Apprentice Software Engineer (FISA)**
  Since October 2025
  - Developing an SDK with ultra-low latency (< 20 ms) remote control capabilities.
  - Network protocols based on QUIC and WebTransport; Rust/WebAssembly codebase.
- **IRIT, Toulouse (31)**
  May – July 2025
  - Master's First Year (M1) Validation Project: Optimization of eXecution Decision Diagrams (XDD)
- **LIS (CNRS Joint Research Unit), Marseille (13)**
  June – July 2023
  - Dual Bachelor's Degree Validation Internship: Research on Probabilistic Automata
- **Parkours Tutor, Marseille (13), Toulouse (31)**
  Since October 2022
  - Academic support and homework assistance for high school students.

ACCOMPLISHED PROJECTS

- Integration of an MCP server with a local LLM
- Autonomous sailboat model

Python:
- Design of an AI-based image classifier
- Implementation of a state-reduction algorithm for a probabilistic automaton

Java:
- Implementation of a SAT solver [DPLL]
- Flashcard application based on double major courses
